ABSTRACT OF THE DISCLOSURE

A method and apparatus for mounting auxiliary eyeglasses or
conventional eyeglasses in which magnets are attached to
appendages on the auxiliary eyeglasses mating with magnets
mounted on the temple extensions of conventional eyeglasses.
The magnets on the auxiliary eyeglasses are mounted in sockets
formed on the appendages of the auxiliary eyeglasses such that
their maximum magnetic force is oriented vertically or parallel
to the plane of the conventional eyeglass frame. The appendages
on the auxiliary eyeglass frame fit beneath the temple
extensions on the conventional eyeglasses frame to hold the
auxiliary frames in place solely by the magnetic attractive
force. The orientation of the magnets is such that the maximum
magnetic force resists any downward movement of the auxiliary
eyeglasses on the conventional eyeglasses when installed. In a
modification of the embodiment, a clip is attached to or formed
on the bridge of the auxiliary eyeglasses for fitting over the
bridge of the conventional eyeglasses. In yet another
embodiment, clips are formed on the frame of the auxiliary lens
to fit over the frame of the conventional eyeglasses. Magnets
are embedded in the bridge of the auxiliary eyeglasses that mate
with complementary magnets in the bridge of the conventional
eyeglasses when the bridge is slid beneath the bridge of the
conventional eyeglasses.
